

Evaluating a Baseline Email Prompt

<https://gemini.google.com/app/70a2a06acd3d53c6>

User prompt: Naive, baseline prompt: Write an email about [TOPIC].

Response: Rubric Breakdown

- **Clarity & Specificity:** 0/30 - The task asks for an email about an unspecified topic, offering zero specific boundaries or details.
- **Structure & Framework Use:** 0/30 - The prompt is a single unstructured sentence that does not use or fill out any framework components.
- **Context & Inputs:** 0/30 - No context, audience, background, or purpose is provided for the email.
- **Output Requirements:** 0/30 - Output length, tone, structure, and style are completely unspecified.

Comparison & Feedback

The provided prompt is a naive, baseline request that lacks essential detail, context, and structural constraints. To dramatically improve this score, organize the prompt into a recognized structure (such as R-T-F or C-A-R-E), define the intended audience and purpose, and specify exact output rules such as word count and tone.

FINAL SCORE: 0

User prompt: My structured prompt: ****Role:**** Your job title is [JOB_TITLE] and your responsibilities include [JOB_RESPONSIBILITIES] ****Task:**** Write an email to [RECIPIENT] about [TOPIC] and asking [REQUEST]. Send from [SENDER]. ****Format:**** The format of the email is a first line addressing the recipient, then a short paragraph (a sentence or two) explaining who you are. Then, write a paragraph about the topic and asking the request. Finish with a line thanking the recipient for their time, and then sign with the name of the sender. **## Output Requirements** ****Format:**** The email should be formatted like a typical email, so there should be a first line addressing the recipient, then a short paragraph (a sentence or two, maximum three sentences) explaining who you are. Then, write a paragraph about the topic and ask the request. Finish with a line thanking the recipient for their time, and then sign with the name of the sender. ****Constraints:**** Only use the information provided by the user. ****Tone and Style:**** Use a professional tone and match it to the job title.

Response: Rubric Breakdown

- **Clarity & Specificity:** 15/30 - The task itself is clear, but all core parameters (job title, recipient, topic, request) are left as generic [PLACEHOLDERS].

- **Structure & Framework Use:** 30/30 - The prompt effectively expands an R-T-F base with explicit section labels (**Role, Task, Format, Output Requirements**) and substantive structural rules.
- **Context & Inputs:** 10/20 - Clear placeholder slots are created for necessary inputs, but zero actual background context or specific content is supplied.
- **Output Requirements:** 20/20 - Excellent, highly detailed formatting specifications, sentence-length constraints, and style guidelines are explicitly defined.

Comparison & Feedback

This designed prompt is a major structural step up from a naive baseline, establishing clear section headers and tight paragraph constraints. However, because it relies completely on unfilled [PLACEHOLDERS], it functions as an empty template rather than a fully executable prompt. To earn a top score, fill in the placeholders with a concrete scenario or provide example text to supply actual context.

FINAL SCORE: 75

*User prompt: My structured prompt revisited: ****Role:**** Your job title is software engineer and your responsibilities include managing a project group, delegating assignments, and solving problems. ****Task:**** Write an email to Tom about the team's current project for a customer and asking him to write some code for the customer. Send from Sarah. ****Format:**** The format of the email is a first line addressing the recipient, then a short paragraph (a sentence or two) explaining who you are. Then, write a paragraph about the topic and asking the request. Finish with a line thanking the recipient for their time, and then sign with the name of the sender. **## Output Requirements** ****Format:**** The email should be formatted like a typical email, so there should be a first line addressing the recipient, then a short paragraph (a sentence or two, maximum three sentences) explaining who you are. Then, write a paragraph about the topic and ask the request. Finish with a line thanking the recipient for their time, and then sign with the name of the sender. ****Constraints:**** Only use the information provided by the user. ****Tone and Style:**** Use a professional tone and match it to the job title.*

Response: Rubric Breakdown

- **Clarity & Specificity:** 25/30 - The task and constraints are clear, but the email topic remains somewhat broad ("the team's current project for a customer") rather than specifying the project name or precise context.
- **Structure & Framework Use:** 30/30 - The prompt effectively implements an expanded R-T-F (Role, Task, Format) structure with explicit, well-defined labels for each section.
- **Context & Inputs:** 15/20 - Basic contextual elements like sender, recipient, and general responsibilities are present, though details regarding the specific customer or code requirements are missing.
- **Output Requirements:** 20/20 - Excellent output constraints covering structural flow, sentence limits, tone, style, and strict adherence to provided information.

Comparison & Feedback

Replacing the unfilled placeholders from the previous revision with concrete details (e.g., Sarah, Tom, Software Engineer) vastly improved the prompt's executability and clarity. The score increased from a 75 to an 90 because the AI can now fully parse the context, role, and task constraints without making broad assumptions. To reach a perfect score, provide a bit more specifics about the customer project itself or what type of code Tom needs to write.

FINAL SCORE: 90
